NEEDLE-BIOMASS, GROWTH AND GROWTH DISTRIBUTION OF PINUS  
RADIATA IN SOUTH AFRICA, IN RELATION TO PRUNING AND THINNING

NADEL-BIOMASSE, ZUWACHS UND ZUWACHSVERTEILUNG VON PINUS RADIATA  
IN SÜDAFRIKA, UNTER DEM EINFLUSS VON ASTUNG UND DURCHFORSTUNG

|---|------|
| <u>1. INTRODUCTION.</u>   |      |
| 1.1. The South African silvicultural system in softwood plantations.....                              | 1    |
| 1.2. Research objectives.....   | 7    |
| 1.3. Species, soil and climate.....   | 8    |
| 1.4. The water balance.....   | 12   |
| <br>  |      |
| <u>2. RESEARCH PROCEDURES.</u>  |      |
| 2.1. Paradyskloof study .....   | 17   |
| 2.2. Tokai study .....  | 23   |
| 2.3. Additional studies.....  | 26   |
| 2.4. Statistical procedures.....  | 27   |
| <br>  |      |
| <u>3. ANALYSIS OF THE PARADYSKLOOF STUDY.</u>   |      |
| 3.1. Growth per hectare.  |      |
| 3.1.1. Basal area growth.....   | 29   |
| 3.1.2. Height growth .....  | 38   |
| 3.1.3. Volume growth.....   | 41   |
| 3.2. Stem analysis.   |      |
| 3.2.1. Introduction .....   | 46   |
| 3.2.2. Response during the first year.....  | 48   |
| 3.2.3. Response during the 2nd and 3rd year.....  | 56   |
| 3.2.4. Response during the 4th and 5th year.....  | 60   |
| 3.2.5. Response during the 6th and 7th year.....  | 66   |
| 3.2.6. Discussion.....  | 70   |
| 3.3. Crown morphometric and related studies.  |      |
| 3.3.1. The relationship between branch diameter and branch length.....                                | 72   |
| 3.3.2. Influence of thinning on branch thickness  | 76   |
| 3.3.3. Interrelationships between branch characteristics.....   |      |
| 3.3.3.1. Relationship between basal area of the primary and basal area of the secondary branches..... | 79   |
| 3.3.3.2. Relationship between diameter of the primary branch and number of secondary branches.....    | 81   |

|   |     |
|---|-----|
| 3.3.3.3. Relationship between diameter of the primary branch and mean diameter of the secondary branches..... | 84  |
| 3.3.4. Needle dimensions in relation to position within the crown.....  | 86  |
| 3.3.5. The ratio dry weight : fresh weight of the needles in relation to position within the crown.....       | 94  |
| 3.4. Needle-biomass, growth and growth distribution   |     |
| 3.4.1. The regression model.....  | 96  |
| 3.4.2. Needle weight per tree.  |     |
| 3.4.2.1. Needle weight of the secondary branch.....   | 104 |
| 3.4.2.2. Needle weight of the primary branch.....   | 108 |
| 3.4.2.3. Total tree needle weight.....  | 112 |
| 3.4.3. Relationship between needle weight and volume growth.....  | 116 |
| 3.4.4. Growth per unit needle weight in relation to position along the stem.....                              | 123 |
| 4. <u>ANALYSIS OF THE TOKAI STUDY.</u>  |     |
| 4.1 Growth per hectare.   |     |
| 4.1.1. Basal area growth.....   | 132 |
| 4.1.2. Volume growth.....   | 134 |
| 4.2. Relationship between crown size, competition and growth.   |     |
| 4.2.1. General.....   | 136 |
| 4.2.2. Crown width and crown length in relation to stand density.   |     |
| 4.2.2.1. Crown width.....   | 139 |
| 4.2.2.2. Crown length.....  | 140 |
| 4.2.2.3. Relationship between crown width and crown length.....   | 141 |
| 4.2.2.4. Relationship between DBH and height above ground of the base of the live crown.....                  | 143 |
| 4.2.2.5. The influence of stand density on mean crown width and crown length.....                             | 144 |
| 4.2.2.6. Relationship between stem diameter, crown width and tree height.....                                 | 147 |

|  |     |
|--|-----|
| 4.2.2.7. Crown closure.....  | 150 |
| 4.2.3. Growth rate per unit area crown projec-<br>tion.  |     |
| 4.2.3.1. Introduction.....   | 151 |
| 4.2.3.2. Basal area growth.....  | 152 |
| 4.2.3.3. Volume growth.....  | 155 |
| 4.2.4. The influence of intraspecific competi-<br>tion within stands.....  | 156 |
| 4.3. Needle-biomass, growth and growth distribution.   |     |
| 4.3.1. Needle-biomass.   |     |
| 4.3.1.1. The precision of the estimate..   | 172 |
| 4.3.1.2. Needle-biomass per tree.....  | 181 |
| 4.3.2. Longitudinal growth distribution.....   | 182 |
| 4.3.3. Growth and growth distribution in<br>relation to needle-boimass.  |     |
| 4.3.3.1. Variability of radial growth...   | 185 |
| 4.3.3.2. Basal area growth in relation<br>to needle-biomass.....   | 187 |
| 4.3.3.3. Volume growth in relation to<br>needle-biomass.....   | 190 |
| 4.4. Crown morphometric studies.   |     |
| 4.4.1. The distribution of branch parameters....   | 191 |
| 4.4.2. Relation between branch diameter,<br>crown section and branch length.....   | 201 |
| 4.4.3. Basal area of the secondary branches<br>in relation to diameter, length and<br>crown section of the primary branch..... | 205 |
| 5. <u>MISCELLANEOUS STUDIES, RELATED TO RESPONSE BEHAVIOUR.</u>  |     |
| 5.1. Early response of P.radiata to pruning.   |     |
| 5.1.1. Procedure.....  | 212 |
| 5.1.2. Diurnal fluctuations.....   | 212 |
| 5.1.3. Daily growth.....   | 220 |
| 5.2.A crown release experiment.....  | 225 |
| 5.3.The influence of rainfall on growth rate.....  | 227 |
| 5.4.Seasonal periodicity of radial growth.....   | 233 |
| 5.5.Daily radial growth of P.radiata in relation to<br>environment.....  | 240 |
| SUMMARY.....   | 250 |
| ZUSAMMENFASSUNG.....   | 258 |
| LITERATURE.....  | 273 |
| LIST OF TABLES.....  | 278 |
| LIST OF FIGURES.....   | 280 |
