SINGLE-TREE PARAMETERS OF NORWAY SPRUCE (PICEA ABIES (L.) KARST.)  
IN RELATION TO SITE AND ENVIRONMENT

Results of a Growth Study on Two Sites in Southern Bavaria

EINZELBAUM-PARAMETER DER FICHTE (PICEA ABIES (L.) KARST.)  
UNTER DEM EINFLUSS VON STANDORT UND UMWELT

Ergebnisse einer Wachstumsuntersuchung auf zwei Standorten  
in Südbayern

CONTENTS

1. Introduction .....	1
2. Branch- and crown	
2.1. The distribution of branches around the perimeter of the main stem .....	4
2.2. Branch angle .....	6
2.3. The number of branches.....	9
2.4. The distribution of branch diameters and -lengths.	12
2.5. The relationship between branch diameter and branch length .....	21
2.6. Branch form factor and branch volume .....	24
2.6.1. The relationship between branch diameter and absolute form factor .....	25
2.6.2. Relationship between branch diameter and true branch form factor.....	30
2.6.3. Relationship between branch volume, branch diameter and branch length .....	32
2.6.4. The distribution of branch volume within the live crown. ....	34
2.6.5. Examination of residuals .....	36
3. Branch weight .....	38
4. Needle length and needle weight	
4.1. Needle length .....	42
4.2. Needle dry weight in relation to position within the live crown .....	46
4.3. Needle dry weight in relation to year of formation	49
4.4. Branch needle weight in relation to year of for- mation.....	52
5. Stem analyses	
5.1. Bark thickness .....	57
5.2. Stem form .....	64
5.3. Ring width patterns .....	67
Summary .....	72
Zusammenfassung .....	76
Literature .....	80
Appendix .....	82

LIST OF TABLES.

	pag
1. Number of branches, classified according to aspect .....	4
2. Analysis of variance of branch diameters.....	5
3. Variance of branch diameters .....	5
4. Analysis of variance for the variances of branch diameters.	6
5. No.of branches, No.of branches in % of total and per m ....	10
6. <u>No.of living branches of stand-grown trees</u> .....	11
7. No.of branches of free-standing trees	
7. Mean branch diameter, standard deviation and coefficient of variability .....	15
8. Estimates of parameters and F-values .....	16
9. Results of the variance-ratio test .....	18
10. Test of significance of differences between means.....	18
11. Estimates of parameters $\beta_0, \beta_1$ and $\beta_2$ and test of signifi- cance of regression coefficients.....	19
12. Mean branch length, standard deviation and coefficient of variability .....	21
13. Analysis of variance and regression equations .....	23
14. Analysis of variance of absolute form factor .....	25
15. Estimates of $\beta_0$ and $\beta_1$ and standard error of the regression- coefficients.....	26
16. Analysis of covariance.....	28
17. Analysis of variance.....	29
18. Regression of true branch form factor on branch diameter...	30
19. Coefficients of non-determination.....	32
20. Analysis of variance for regression of branch volume on branch diameter and -length.....	33
21. Branch volume in relation to branch diameter and branch length.....	35
22. Branch volume distribution.....	34
23. Coefficients of multiple determination and the modified coefficients of multiple determination for the logarithmic equation.....	38
24. Analysis of variance for the logarithmic weight equation...	39
25. Coefficients of multiple determination in branch volume and branch weight equations.....	40
26. Analysis of multiple covariance.....	40
27. Branch weight in relation to branch diameter and -length...	41

28. Expected values of mean squares.....	42
29. Analysis of variance of needle length variability.....	44
30. Analysis of variance of needle length.....	45
31. Height above ground and relative position of branches; needle dry weight per 300 needles.....	47
32. Analysis of covariance for $H_0: \beta_{11} = \dots \beta_{41}$ .....	48
33. Needle dry weight for different years of formation.....	49
34. Regression of needle dry weight per 300 needles on year of formation.....	51
35. Analysis of variance of correlation coefficients.....	51
36. Analysis of variance of regression coefficient $b_1$ .....	52
37. Needle dry weights and relative weights.....	53
38. Analysis of variance for logarithmic second-degree equation.....	55
39. Mean and relative bark thickness .....	58
40. Estimates of correlation coefficients.....	57
41. Correlation coefficients for the relationship between relative bark thickness and height above ground .....	59
42. Coefficients of auto-correlation.....	60
43. Test of the hypothesis $H_0: \mu_y = 1$ .....	60
44. Analysis of variance of bark thickness.....	61
45. Analysis of covariance .....	61
46. Analysis of variance and regression equations.....	66
47. Intercorrelations in trees 3 and 4.....	71
48. Variance, standard deviation and coefficients of variability of ring widths.....	72
